## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 1-30 are allowed.
2. The following is an examiner's statement of reasons for allowance. The instant claims are allowable for the following reasons:
  - a. None of the prior art teaches a system wherein gradients such as time or power are used in the evaluation of responses from neighboring nodes in route selection. The applicant points this out in paper #20, page 13, paragraph 2.
  - b. Further, none of the prior art teaches a system wherein the next step in a route is opportunistically selected and "the route...is not at any stage fixed, and that each intermediate station makes a fresh decision as to which further station to transmit to" (paper #20, page 14, paragraph 1).
  - c. Finally, references such as that to Dube teach a similar system but differ in one basic function. Dube teaches a system wherein signals are sent out from each station and the strength of these signals is evaluated at neighboring stations. The current claims describe a system wherein a signal is sent to neighboring stations and those stations in turn reply with availability information. The opportunistic selection of the next step is made using the responses from the neighboring stations and predetermined criteria, such as the gradient information.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
